# GLM MANIFOLDS ARE LOST FOAM CASTED

Through the use of precisely molded foam pieces a highly accurate model or pattern for the desired casting can be made.

Complex internal passageways are in the mold itself, not formed by cores.

For marine manifolds, elbows and thermostat housings, an accurate cast is crucial for the proper function of the engine part.

A Fully Tuned GLM Manifold will Reduce Back Pressure and Enhance Air Flow adding More Horsepower to your engine.
